وصلني (Waslni)

* description of my project:

It is a business platform between customers, commercial activities and even non-commercial (services), as it provides an extensive network of leading service providers.
It provides knowledge of the best place through the evaluation of previous visitors, as well as knowledge of who provides quality services and reasonable prices.

It is an easy-to-use platform where it provides detailed information about activities classified according to main categories, so that the customer can easily reach the place he wants and know details about him, and the presence of a phone number to communicate and also a map showing his location, in addition to other communication capabilities such as Facebook or its own websites.

The Waslni platform includes many commercial activities that offer many products such as car sales, salons, and fashion
It also includes non-commercial activities that provide services such as doctors, engineers, lawyers, schools and charities.

the goal of your project:

Therefore the main objective is that the platform provides the most accurate details of activities in the simplest possible way to serve customers and at the same time, the two parties benefit by saving effort and time.
So that it is easy for the customer to find the best service provider or product in his region or anywhere in Jordan at appropriate prices and on the other hand enabling the activity to reach the global and get good commercial qualities.

* Technology and language used:

I have used Laravel to build my site, which is a framework that is built in the language of PHP which is characterized by simplicity and security so that it provides high authentication.
Also, it is based on MVC, so that the code can be easily handled and easily modified.
In addition to using a database (Sql), which contains relationships between the tables emerging within it.

* Main features of the project:
-Filter activities and searches by region.
- Provides detailed information about the place, working hours, prices and it location on Google Map.
- The customer can give his opinion and write the comments about the place Provides a fast and easy form to mobilize for the activity owner.
- Show the number of viewers of the place.
